

Group Assignment 2: Exchange Rate Forecast

Logan Rechin, Joe White
ECO 442

Data

We analyze the Japanese yen relative to the U.S. dollar and quote the exchange rate as

$$S_0 \equiv E_{\text{JPY}/\$} = \text{yen per 1 U.S. dollar.}$$

We use the spot and forward quotes:

$$S_0 = 152.904 \text{ JPY}/\$.$$

The interest rates are annualized government yields with matching maturities in each country (3-month and 1-year):

- U.S. 3-month interest rate: $i_{\$}^{3\text{mo}} = 3.69\%$
- Japan 3-month interest rate: $i_{\text{JPY}}^{3\text{mo}} = 0.72\%$
- U.S. 1-year interest rate: $i_{\$}^{1\text{yr}} = 3.44\%$
- Japan 1-year interest rate: $i_{\text{JPY}}^{1\text{yr}} = 1.05\%$

Interest Rate Parity

Covered interest rate parity:

$$\frac{1 + i_{\$}}{1 + i_F} = \frac{F_F^{\$}}{E_F^{\$}}.$$

The forward rate is:

$$F^{\text{IRP}} = S_0 \left(\frac{1 + i_{\text{JPY}}}{1 + i_{\$}} \right).$$

Uncovered interest rate parity is:

$$\frac{1 + i_{\$}}{1 + i_F} = \frac{E_F^{1\text{yr}\$}}{E_F^{\$}}.$$

(1) IRP Forecasts

3-month implied forward rate

$$F_{3\text{mo}}^{\text{IRP}} = 152.904 \left(\frac{1 + 0.0072}{1 + 0.0369} \right) = 148.519 \text{ JPY}/\$ \approx 148.52.$$

1-year implied forward rate

$$F_{1\text{yr}}^{\text{IRP}} = 152.904 \left(\frac{1 + 0.0105}{1 + 0.0344} \right) = 149.371 \text{ JPY}/\$ \approx 149.37.$$

(2) Market Forward Rates and Comparison

From the USD/JPY forward-rates from FXEmpire we use:

$$F_{3\text{mo}}^{\text{mkt}} = 151.758, \quad F_{1\text{yr}}^{\text{mkt}} = 148.998.$$

Horizon	IRP forward F^{IRP}	Market forward F^{mkt}	Difference
3 months	148.519	151.758	-3.239
1 year	149.371	148.998	0.373

Discussion

Since U.S. interest rates exceed Japanese interest rates at both maturities ($i_{\$} > i_{\text{JPY}}$), Covered IRP implies that the yen should trade at a forward premium relative to the dollar, which means the forward rate should be below the spot rate. This is what we observe for the 1-year forward rate.

Small differences between the IRP-implied forward and observed market forward rates can arise from bid-ask spreads, timing mismatches across sources, and differences in quote/compounding conventions for interest rates and forward contracts.
